

Bacteria Sampling Report

Waterbody:
Three Mile Lake

Three Mile Lake

Date Sampled:
7/15/2009

Joyce Beedie
PO Box 482
Paw Paw MI 49079

Location	E. coli	Total Coliforms	Interpretation
East	20	1200	● Water meets bacteriological standards for safe swimming.
South	40	2800	● Water meets bacteriological standards for safe swimming.
West	<1.0	1200	● Water meets bacteriological standards for safe swimming.

Bacterial counts are expressed as the number of Colony Forming Units per 100 milliliters (CFU/100mL).

For full body contact recreation (including swimming) counts of E. coli should not exceed 130 (CFU/100mL) as a monthly geometric mean of at least five samples per the State of Michigan standard, or single samples should not exceed 298 (CFU/100mL) [235 CFU/100mL in a designated bathing beach area] per Federal (EPA) guidelines.

Current recreational water quality standards do not rely on Total Coliform counts, but the incidence of swimming-related gastrointestinal illness has been shown to increase at Total Coliform concentrations of 2,300 (CFU/100mL) and above.
