

Bacteria Sampling Report

Waterbody: Three Mile Lake
 Three Mile Lake Joyce Beedie
 Date Sampled: PO Box 482
 9/5/2006 Paw Paw MI 49079

Location	<i>E. coli</i>	Total Coliforms	Interpretation
Shoreline	<1.0	<1.0	● Water meets bacteriological standards for safe swimming.

Bacterial counts are expressed as the number of Colony Forming Units per 100 milliliters (CFU/100mL).

For full body contact recreation (including swimming) counts of *E. coli* should not exceed 130 (CFU/100mL) as a monthly geometric mean of at least five samples per the State of Michigan standard, or single samples should not exceed 298 (CFU/100mL) [235 CFU/100mL in a designated bathing beach area] per Federal (EPA) guidelines.

Current recreational water quality standards do not rely on Total Coliform counts, but the incidence of swimming-related gastrointestinal illness has been shown to increase at Total Coliform concentrations of 2,300 (CFU/100mL) and above.

Approved by Jaimie Conroy Date 05-Sep-06
